Automated Feedback Analysis Workflow

JOHN OTIENO ODINDI

My objective is to create an automated feedback analysis system that does all of the following:

1. Collects feedback

2. Sends the feedback to Gemini AI

3. Returns structured output:

Sentiment — Positive / Neutral / Negative

Summary — a short 1-2 sentence recap of the message

4. Stores the output in Google Sheets

5. Triggers an email alert for negative sentiment

Introduction

Creating an automated feedback analysis flow.

Tool	What It Does	Usage
Google Forms	Collects responses via clean, shareable forms	Perfect for gathering feedback in a structured way
Google Sheets	Stores and analyzes form results	Great for sorting, filtering, calculating trends, and saving AI-generated output
Make.com	Automates workflows between your apps	Lets you build powerful flows like: "If feedback is negative → update sheet + ping"
Gemini AI	Classifies and interprets free-text responses	Helps automatically analyze sentiment without writing custom code or logic

Form description

How satisfied are you with our product or service? *

☐ Very Satisfied

☐ Satisfied

☐ Neutral

☐ Unsatisfied

☐ Very Unsatisfied

☐ Other:

Please describe your experience or share any feedback in your own words

Paragraph

Long answer text

Required

The workflow diagram illustrates a process for collecting and analyzing feedback. It starts with Google Forms, which fetches responses. These responses are then processed by Google Gemini AI to create completions. The resulting data is parsed as JSON and then added as a new row in a Google Sheet. The sidebar on the right provides details for the Google Sheets step, showing a connection to 'My Google connector', a search method of 'Search by path', a drive of 'My Drive', a spreadsheet ID of 'PULSE CHECK', a sheet name of 'Form Responses 1', and a checkbox for 'Take contains headers' set to 'Yes'.

Pulse Check

5 responses

How satisfied are you with our product or service?

5 responses

Satisfaction Level	Percentage
Very Satisfied	20%
Satisfied	20%
Neutral	20%
Unsatisfied	20%
Very Unsatisfied	20%

Please describe your experience or share any feedback in your own words

5 responses

- The best product in the market so far.
- The product shows it is of very high quality.
- The product was actually not as good as the one am using currently.
- I did not like the product. The quality was not up to the standard.
- It is of the same quality like the products in the market.

3.JSON PARSE

JSON

Data structure

My data structure Add

Data structure describes how the parsed data will appear. If you don't create a data structure, Make will try to build a structure from the data obtained during the manual run of the scenario.

Results

System Outcome

Insight You Can Derive

Google Form collects structured feedback

Ensures consistent input for both quantitative and qualitative analysis

Gemini AI classifies sentiment automatically

Saves time and enables scalable sentiment tracking without manual review

Gemini AI summarizes feedback in 1–2 sentences

Makes it easy to scan responses and identify key themes quickly

Google Sheets stores structured output

Enables sorting, filtering, and trend analysis over time

Make.com automates the entire workflow

Handles large volumes of feedback without manual intervention

JSON format ensures clean data parsing

Guarantees compatibility with automation tools and reliable data extraction

Email alerts for negative sentiment

Allows fast response to dissatisfied users, improving retention and reputation

Challenges & improvements

Challenge	Description
Inconsistent AI Output Format	Gemini AI may return output that doesn't match the expected JSON structure, causing parsing errors.
Limited Sentiment Categories	Using only Positive, Neutral, and Negative may oversimplify nuanced feedback.
False Negatives in Alerts	Some negative feedback might be misclassified as Neutral, leading to missed alerts.
Manual Setup Required	Initial configuration in Make, Google Forms, and Sheets requires technical setup and testing.
Scalability Limits	Google Sheets may become slow or cluttered as feedback volume increases.
No Feedback Loop for AI Accuracy	There's no built-in way to correct or retrain Gemini AI if it misinterprets feedback.

What can be improved.

Improvement	Benefit
Add validation for AI output	Prevents parsing errors by catching malformed JSON and triggering retries or alerts
Expand sentiment granularity	Allows deeper insights by including categories like “Very Positive” or “Constructive Criticism”
Train Gemini with examples	Improves consistency and accuracy by guiding the AI with sample responses in the prompt
Integrate dashboards	Enables visual tracking of sentiment trends using tools like Google Data Studio
Add feedback correction option	Lets users or admins manually adjust sentiment classification for better accuracy
Enable batch processing	Boosts efficiency by handling multiple responses at once, reducing API calls
